

WORK & SAFETY FOOTWEAR GUIDE

AUSTRALIA

EVERYWHERE
LIFE TAKES ME™

Work & Safety footwear guide

We are introducing a new style of catalogue for our Work and Safety range. With individual pages for every product and the inclusion of fold out feature and industry cheat sheets, the guide will be an enduring asset to assist you in providing the very best footwear information to your customers.

Inside, you'll find fact sheets for all our work and safety boots, run-downs of important safety features, standards, how to find the right boot for the right industry or environment and tips on how to keep boots looking their best.

Each page is designed to lift out so the catalogue pages can be ordered to best suit the user. Styles with a safety toe cap are indicated with an orange tab and work boots (without a safety toe cap) are marked with a green tab.

A history of never standing still

In 2020 Blundstone is proudly celebrating 150 years of making the toughest, most comfortable and stylish boots for all walks of life. Established in Tasmania in 1870, the company remains 100% family owned and continues to be shaped by the vision and values of its owners and the families who built it.

*"For a family business, Blundstone is a remarkable story of survival. There are not many brands that have seen and been a part of world events and changes for 150 years, and to now be in **70 countries across six continents** is a feat that our founders would never have imagined.*

We're incredibly proud of our history and the future looks pretty promising too."

Steve Gunn CEO

150 YEARS
Blundstone
TASMANIA · AUSTRALIA

Led by design

Since 1870, Blundstone has been making tough, quality boots that are equally suited to work or play.

Decades of innovative design and production means Blundstone now oversees a global supply chain, bringing together the best ideas, materials and designs to create a wide range of products for everywhere life takes you.

Our ongoing research and development means we're always improving comfort, protection, performance and aesthetics.

Our History

The Blundstone story started back in the 1800s, when two English families, the Blundstones and the Cuthbertsons, arrived in Hobart, Tasmania and set up separate boot manufacturing businesses.

In the early 20th century, the Cuthbertson family bought the Blundstone business. They decided to keep the Blundstone name because of its long association with quality and reliability. Today the Cuthbertson family still owns Blundstone and the name still inspires confidence in a quality product.

While we remain a Tasmanian family business, our boots are now worn and loved the world over.

QUALITY

When we started making boots in the 1800s, we were dedicated to crafting a quality product. That's still our commitment to you today. Our company is quality endorsed to ISO 9001:2015, and every part of the production process helps ensure that when you put on a pair of Blundstones, you're wearing some of the best boots in the world.

MANUFACTURING

We manufacture our leather footwear in Vietnam, Thailand India, Mexico and China. These factories are premium-quality operations that are environmentally and socially responsible. The jobs in these factories are highly sought after, and we engage our personnel to ensure the standard of manufacturing is consistent with our stringent quality requirements. Our gumboots are manufactured at our headquarters in Tasmania.

ENVIRONMENT

We're committed to sustainable purchasing and manufacturing policies, each evaluated with environmental considerations in mind. We maximise our use of recycled and recyclable materials in our manufacture and packaging.

COMFORT

Blundstone is a pioneer in enhancing comfort and safety, and we're passionate about finding new innovations to bring to customers. We take a multifaceted approach to comfort, with our SPS Max Comfort system, footbeds, linings and uppers making Blundstone footwear the best that you'll find anywhere.

Comfort with every step

All Blundstone boots are engineered to provide the wearer with a comfortable experience, ready to face a long day on the job. Our different boots feature different comfort systems, ensuring there is a boot suitable for everyone.

BREATHABLE UPPER MATERIALS

With nearly 150 years' experience, we go the extra mile to source and select the right materials to craft the best boots we can. We inspect each piece of leather by hand before it begins the manufacturing process. If it doesn't meet our quality standards, we choose not to use it. Simple as that.

QUALITY LININGS

Designed to keep feet comfortable by drawing heat away from feet in hot conditions and providing warmth when it gets cold. The linings are anti-bacterial, breathable and quick drying, keeping you comfortable all day.

SPS MAX COMFORT

Has been designed and engineered to provide ultimate protection and support for the wearer with the inclusion of XRD® Extreme Impact Protection Technology. Absorbing up to 90% of energy at high speed impact with every step taken, it is designed to reduce workplace fatigue and orthopaedic problems in lower back, legs and feet. This high-tech material isn't only in our safety footwear but our work and casual boots too.

FOOTBEDS

All Blundstone footwear incorporates a comfort footbed to cushion and nurture the foot. Our footbeds are all breathable and washable and can be replaced as required. There are different degrees of padding incorporated into different footbeds. Our ultimate comfort arch footbed is made from soft polyurethane, covered with a full-length cushion of foam polyurethane, topped by a long wearing mesh cover. This footbed has an airflow and moisture wicking system and also includes a large pad of XRD® under the ball of the foot.

Electrical properties of footwear

There are three categories of electrical conductivity in safety footwear. Careful consideration should be given when selecting footwear to ensure it will provide the optimum protection in the environment where the footwear will be worn.

Contact your Blundstone Representative or call our Customer Service team for assistance.

ELECTRICAL HAZARD RESISTANT FOOTWEAR (EHR)

(EHR) is designed to provide wearers with the greatest potential protection against electrical hazards or if they have accidental contact with a live electrical circuit.

The non-conductive materials in EH boots act as an insulator, therefore blocking the flow of electricity out of the body through the feet. Without the exit point for electrical flow, the charge will not be 'grounded' and electrocution potential is greatly reduced.

The level of electrical hazard protection of your footwear is severely lessened when there's excessive wear on the outsole and the non-conductive material is compromised, or with exposure to wet and humid conditions. Steel toe caps are insulated. If safety toe caps become exposed, the footwear should be replaced.

Blundstone products certified as electrical hazard resistant are designed to withstand 18,000V at 60Hz for 1 minute through the outsole (with no current flow or leakage current in excess of 1.0mA under dry conditions: ASTM standard F2413-18). This type of boot provides increased electrical hazard protection for electricians, workers using mains voltage power tools, and for general applications where risk of electrocution is present.

ANTI-STATIC FOOTWEAR

Anti-static footwear should be used if it is necessary to minimise electrostatic accumulation emanating from the wearer by conducting electrostatic body charge to the ground, reducing the risk of spark ignition from flammable substances and vapours and where the risk of electric shock has not been eliminated. Anti-static footwear provides a reduced level of protection against electrical hazards compared to Electrical Hazard footwear.

The electrical resistance of anti-static footwear can be changed significantly by flexing, contamination or moisture. This footwear might not perform its intended function if worn in wet conditions or over long periods of time, if the sole is altered or damaged or dirt inhibits the contact points. It is therefore necessary to ensure that the product can fulfil its designed function of dissipating electrostatic charges while offering a sufficiently high level of protection during its entire life. It is recommended that the user establish an in-house test for electrical resistance, which is carried out at regular and frequent intervals.

CONDUCTIVE FOOTWEAR

Conductive footwear provides no protection against electrocution. This type of footwear helps eliminate discharge in environments where the accumulation of static electricity on the wearer can be a hazard, such as while handling explosives or other volatile materials. We do not make any footwear in this category.

CAUTION: Electricity is dangerous. Correct precautions must be taken where any risk of electrocution is present. For advice on safe practice contact your safety officer or local authority.

The outsole is heat resistant to temperatures up to at least 300°C. The soling material has a very high insulating value and can be expected to provide short term resistance to melting and cracks in temperatures in the highest ranges that will normally be encountered in an industrial environment.

The outsole is compliant to slip resistance standards in AS 2210.3:2019 and provides slip resistance through a combination of design, tread pattern and soling material.

Premium leather is treated to provide extra water-resistant properties. Footwear with this symbol is particularly suitable for muddy conditions.

Gumboots which are highly resistant to water and liquid penetration.

The soling material is resistant to most chemicals encountered in industrial situations underfoot.

The soling material is resistant to most organic fats and oils, ideal for kitchen, poultry and farming environments where exposure to biological contamination is a possibility.

Guide to icons

Keep an eye out for these icons on the product pages — they'll help you select the boots that are most fit for purpose.

Broad fitting 200 Joule impact resistant Type 1 steel toe cap. Steel is the safest toe cap material available, providing the highest levels of resistance in constructed footwear against rolling side compression and cut resistance.

Capable of withstanding an impact resistance of 200 joules, they're the ideal boot if you're on your feet all day and only require light protection. And because they're metal free, they won't set off any metal detectors.

Utilising XRD® Technology, SPS MAX comfort has been designed to provide ultimate protection and support, reducing fatigue and orthopaedic problems in the lower back, legs and feet.

Certified to ASTM F2413-18. Clause 5.6 for electrical shock hazard resistance. Where there is a risk that a person may come in contact with a live electrical circuit, electrical shock hazard footwear will provide the best possible protection against electrical shock hazard.

Anti-static safety footwear is designed to prevent the build up of static electricity by conducting the static charge to the ground. This greatly reduces the risk of electric shock, and is best used in workplaces including petrochemical plants, airport tarmacs and anywhere you're exposed to flammable vapours.

The outsole is heat resistant to temperatures up to at least 140°C. The soling material will withstand temperatures encountered in the vast majority of industrial applications.

Provides maximum resistance against perforation of the sole by nails and other sharp objects. Our leather boots with this feature have a composite penetration insole, the gumboots offering penetration resistance have a steel midsole.

Metatarsal guards provide protection for the top of the foot against a common traumatic foot injury - fractures of the metatarsal bones. A moulded guard of XRD® Extreme Impact Protection material provides flexibility and absorbs up to 90% of extreme impacts, time after time.

These boots are suitable for industries where caustic acid spillage is a risk. They include a Chemical resistant leather upper and PU/Rubber outsole. Complies to standard EN 13832-2:2006 - tested against Sodium Hydroxide (caustic soda) and Acetic Acid.

Kevlar® stitching provides maximum strength and protection against metal splash and immersion.

Top-of-the-range bamboo lining is designed specially to keep your feet cool and comfortable. It's thermal regulating, deodorizing, anti-bacterial, anti-fungal, breathable and quick drying.

XRD® Extreme Impact Protection combines the latest materials with ultimate design capabilities. Soft and flexible to the touch, yet tough on impact - XRD® Technology is a lightweight, breathable material that's engineered for maximum shock absorption and comfort.

The extreme BOA Fit System makes it easier and faster to get your boots on. They're also ultra adjustable, which means that you can get a safer, more personalised fit.

A BSI certified product is your mark of quality. All Blundstone projects are monitored by the BSI to ensure that the manufacturing process at each certified site has the capability to produce certified products in compliance with each product's specified certification features.

Selecting the Correct footwear

Safety footwear sold in Australia must comply to Standard AS 2210.3:2019, but not all safety boots are the same.

Here's how to pick the correct pair for your customers:

1. FIT FOR PURPOSE

Choose appropriate footwear for the intended use, paying particular attention to the underfoot conditions.

2. SAFETY TOE CAP

Both steel and composite toes provide safety for different industries. It's important to select the right safety toe for the conditions.

3. QUALITY UPPER

This allows the footwear to be breathable, protective and supportive, whether it is leather or material.

4. SOLE DESIGN + MATERIAL

Ensure the tread offers suitable slip resistance. The material is also important for heat resistant properties.

5. DESIGN

Do they need increased ankle or calf protection?
Do they need a lightweight option?

When to replace boots

All good things come to an end. Here are the key indicators that it's time to replace safety boots.

It's important to ensure your customers are in the most appropriate safety footwear for their job. There are 6 signs that footwear needs to be upgraded:

1. The toe cap is exposed.
2. The leather is torn, worn, split or damaged.
3. The soles have worn down and no longer provide adequate tread.
4. The boots have been subjected to significant impact or trauma.
5. They no longer provide comfort and have excessive wear.
6. They've been exposed to harmful chemicals or products.

Size guide

The correct fit means a safer, more comfortable boot.

Commonly used terms

LEATHERS

Full Grain: Refers to hides that have not been sanded, buffed or snuffed to remove imperfections on the surface of the hide.

Waterproof/Water resistance: A specific formulation in the tanning process is used to provide water resistance/waterproofing in leather. The use of waterproof leathers does not mean the footwear itself is waterproof unless internal stitch holes are sealed, or a waterproof membrane is added to the construction inside the boot. Water resistant footwear is ideal in muddy or wet conditions but should not be used where the footwear is to be submerged. A fully waterproof gumboot should be used in these conditions.

Platinum Quality: High quality leather that undergoes a special tanning process to make it stronger and more abrasion-resistant than conventional leathers. This offers better protection against grease, oils, salt, urine, lactic and other damaging acids.

Premium: Highest quality leathers and hides.

Print: Leather which has a 'printed' surface. The print assists in disguising small areas with surface marks. The marks are visual only and do not affect the performance of the leather.

Oil tanned, Kip or Waxy: The addition of oils or waxes in the tanning process assists in preventing the leather from drying out and cracking.

Nubuck: Full grain leather that is slightly 'buffed' or 'sandpapered' to give it a luxurious and ever-changing finish.

Suede: Suede leather is made from the underside of the hide

SOLING TYPES

PU: Polyurethane - a cellular material used as a lightweight, cushioning soling material.

Previously one of the most common soling materials, it is now used primarily as a soft density midsole material with an outsole of Thermoplastic or Rubber

PUR: PU midsole with a nitrile rubber outsole which has enhanced qualities for cut, abrasion and slip resistance. The outsoles of all Blundstone PUR footwear (the XFoot Rubber range) are heat resistant to 300°C

TPU: Thermoplastic urethane/ polyurethane, is a high-density thermoplastic urethane outsole that has outstanding abrasion resistant properties with a soft density Polyurethane cushion midsole to enhance impact absorption.

EVA: Ethylene vinyl acetate (EVA) is a rubber-like copolymer which is both soft and flexible. It is often used as midsole material or as part of an outer sole and provides excellent shock-absorbing qualities.

Cheat Sheet by boot feature

If you've got a customer with a specific set of requirements for their boots, make this handy cheat sheet your reference.

It'll help you find the footwear that has all the features they need.

SAFETY BOOTS

A pair of work boots is useless if they're not safe and comfortable. Often made for specific conditions, safety boots are all about hardcore features that are built around keeping feet secure — in all kinds of environments — while still offering a range of comfort features.

The boots in our safety series come in a range of elastic sided, lace up, Boa® Fit System or zip sided designs – all with a protective toe cap for maximum safety.

You can recognise our Safety Boot range through the orange colouring throughout the rest of this document.

Australian Safety Standards

All Blundstone safety footwear complies to the Australian Safety Standard AS 2210.3:2019. The objective of this Standard is to provide manufacturers and users with requirements for footwear intended for use in workplace applications.

Safety footwear is defined as: Footwear that incorporates protective features to protect the wearer from injuries which could arise through accidents, fitted with toe caps, designed to give protection against impact when tested at an energy level of at least 200 Joules and against compression when tested at a compression load of at least 15kN.

The testing for standard AS 2210.3:2019 compliance covers many facets of the footwear construction including design, upper construction (including leather properties), linings, durability and slip resistance of outsole materials, insoles, toe protection and specific ergonomic features.

Certain workplace environments require additional protective features in footwear including penetration resistance, electrical properties, water resistance and metatarsal protection – these requirements are also addressed in additional clauses in the above standard.

It is imperative that the correct safety footwear is selected for the intended application.

Workplace environments and risk factors vary enormously, and OH&S risk assessments should be consulted before choosing footwear protection.

The #992 is loaded with safety and comfort features - and the inclusion of XRD® Technology means it is the ultimate in workboot comfort.

- Wheat water resistant nubuck, 150mm height, safety boot
- 7 eyelet lace up with lace locking device
- Convenient heavy duty zip with zip fastener
- Moulded TPU bump cap for added leather protection
- Padded tongue and collar
- Thermal regulating bamboo lining
- Low density shock absorbing polyurethane midsole with anti-bacterial agent
- Rubber outsole designed to specifically increase slip resistance in varied environments
 - Excellent cut and slip resistance, highly resistant to hydrolysis and microbial attack
 - Heat resistant to 300°C
 - Oil, acid & organic fat resistant
- SPS Max - XRD® Technology in the heel and forepart strike zones for increased impact protection
- Removable Comfort Arch footbed with XRD® Extreme Impact Protection forepart insert for greater shock absorption and comfort. Footbed is anti-bacterial, washable and breathable
- Steel shank—ensures correct step flex point, assists with torsional stability
- Electrical hazard resistant
- Broad fitting 200 joule impact resistant steel toe cap

SAFETY

Blundstone's #994 is the ultimate boot for heavy industry offering maximum protection with a metatarsal guard, a penetration resistant insole, a steel toe cap and kevlar stitching.

SPS Max Comfort system featuring XRD® Technology in the heel, forepart of the sole construction and the PU footbed.

Molded XRD® Extreme Impact Protection metatarsal guard - provides outstanding foot flexibility and comfort without compromising on safety.

Toe Caps

We don't believe in compromising on safety, which is why we use steel safety toe caps in a large range of our safety footwear.

Steel toe caps provide the maximum protection against impact, cuts, penetration and rolling forces such as forklifts and heavy moving machinery.

Although Blundstone have traditionally used steel toe caps, with the advances in composite toe material we are now manufacturing footwear that is suitable for light industries, hospitality, warehousing and security. However, if your feet are exposed to the risk of repetitive impacts, penetration, cutting hazards or electrical hazards, then we recommend that you consider one of our steel safety toe boots as they may be more suited to your needs.

It is imperative that the correct safety footwear is selected for the intended application. Workplace environments and risk factors vary enormously and OH&S risk assessments should be consulted before choosing footwear protection.

Metatarsal Protection

Blundstone has been protecting the feet of Australian workers for 150 years, keeping them both safe and comfortable.

Utilising XRD® Extreme Impact Protection in a moulded metatarsal pad enables ultimate protection without adding uncomfortable bulk and weight to the boot.

The moulded XRD® Technology metatarsal guard provides full coverage from the tongue to the steel toe cap, covering the vulnerable metatarsal bones with a soft, non-constricting pad. It has been designed specifically to utilise the natural behaviour of polymers - it exploits the phenomenon that polymers can act as either a soft or firm material dependent on the rate of impact. When the XRD® is in normal use, it is soft and contouring allowing flexibility and ease of movement. When impacted, the polymers 'freeze', creating a protective shell that shields the vulnerable metatarsal bones of the foot from impact.

The unique design and superior impact performance of XRD®, combined with its lightweight and low-profile properties, enables Blundstone to create a boot that provides metatarsal protection without compromising on all-important foot flexibility and comfort.

Anti-static footwear provides some protection against electrical hazards from live circuits but not as great as electrical hazard resistant footwear.

Anti-static footwear discharges anti-static build-up. This dissipation of electrostatic charges avoids the risk of spark ignition of flammable substances and vapours. Powder coating, petro-chemicals, gas works, airport tarmac staff and refineries are some of the industries that call for anti-static footwear. Some of these environments regularly test worn footwear to ensure they remain in compliance. Again the condition of the footwear throughout its life will impact on the coverage provided.

BS EN ISO 20345:2004

- Wheat Nubuck ANTI-STATIC safety boot – 150mm height
- Quick closure and simple release Boa® lacing system that is adjustable for a personalised fit
- Polyurethane midsole. Thermoplastic polyurethane (TPU) outsole highly resistant to hydrolysis and microbial attack
 - Oil, acid & organic fat resistant
 - Heat resistant to 140°C
- SPS Max - XRD® Technology in the heel and forepart strike zones for increased impact protection
- Toe and heel reinforcement for extended wear protection
- Removable Comfort Arch footbed with XRD® Extreme Impact Protection forepart insert for greater impact absorption and comfort. Footbed is anti-bacterial, washable and breathable
- Fitted shank for maximum torsional stability
- Broad fitting impact resistant steel toe cap

Anti-static footwear provides some protection against electrical hazards from live circuits but not as great as electrical hazard resistant footwear.

Anti-static footwear discharges anti-static build-up. This dissipation of electrostatic charges avoids the risk of spark ignition of flammable substances and vapours. Powder coating, petro-chemicals, gas works, airport tarmac staff and refineries are some of the industries that call for anti-static footwear. Some of these environments regularly test worn footwear to ensure they remain in compliance. Again the condition of the footwear throughout its life will impact on the coverage provided.

SAFETY JOGGER

Blundstone Safety Joggers have a rubber outsole and an EVA midsole which provides cushioning and shock protection. They're a lightweight option for those requiring a safety toe cap.

Our lightweight safety joggers are our lightest ever, providing you with all day comfort, keeping you light on your feet, even if your job is hard on everything else.

From a strong composite safety toe to superior elastic lace to impact resistant footbeds, our joggers provide the perfect blend of safety and comfort, designed for those who tread the aisles of warehouses, couriers run off their feet, removalists, and light industrial workers.

This range comes in three distinct styles, all three engineered to make life easier for those who live on their feet.

Blundstone safety joggers, a lightweight, airport friendly option packed with loads of comfort features.

SAFETY

#793

SAFETY

BLACK/WHITE
BREATHABLE
NYLON

#793

When you need to be light, safe, and fast on your feet, the #793 safety jogger is the ideal choice.

- Black/white breathable nylon upper anti-static uniform safety jogger
- Designed for ultimate lightweight comfort
- Removable PU foam footbed with XRD® Extreme Impact Protection heel insert for greater shock absorption and comfort. Footbed is anti-bacterial, washable and breathable
- XRD® Technology inserted into the forepart of the innersole
- Rubber outsole has a high coefficient of friction for increased grip/slip resistance and durability
 - Oil, acid and organic fat resistant
 - Outsole heat resistant to 140 °C
- TPU toe guard and Heel Torsional Stabiliser
- Elasticated laces for quick fastening. Standard laces are also included
- Tongue pocket to hide laces and reduce trip hazard potential
- Ergonomically engineered toe spring for reduced wearer fatigue
- Nylon shank—ensures correct step flex point and assists with torsional stability
- Airport friendly
- Broad fitting 200 Joule impact resistant composite toe cap

However, if your feet are exposed to the risk of repetitive impacts, penetration or cutting hazards or electrical hazards, then we recommend that you consider one of our steel safety toe boots as they may be more suited to your needs.

WOMEN'S SAFETY RANGE

A natural fit for hard work

Designed and manufactured specifically for women, offering optimum fit, support and comfort along with a range of safety features.

Women's safety boot

The #897 is as natural a fit for women as it is for hard work.

This fit for purpose boot boasts a new look design with an easy on, easy off zip side.

Coupled with breathable, water-resistant leather and anti-bacterial lining, this is quality and comfort rolled into one. The #897 is packed with product features to withstand tough environments, like XRD® Extreme Impact Protection, a moulded TPU bump cap and a low-density shock absorbing PU midsole. Safety, comfort and strength, all in a women's fit, come to the fore in the new #897.

#884

Designed and built for women, the #884 features XRD® cushioning in the footbed and midsole – which means they're perfect for long days on the job.

- Black breathable nylon upper anti-static uniform safety jogger
- Lightweight, comfort fit designed specifically for women
- Blue, breathable, moisture wicking lining
- Removable PU foam footbed with XRD® Extreme Impact Protection heel insert for greater shock absorption and comfort. Footbed is anti-bacterial, washable and breathable
- XRD® inserted into the forepart of the innersole
- Rubber outsole has a high coefficient of friction for increased grip/slip resistance and durability
 - Oil, acid and organic fat resistant
 - Outsole heat resistant to 140°C
- TPU toe guard and Heel Torsional Stabiliser
- Elasticated laces for quick fastening. Standard laces are also included
- Tongue pocket to hide laces and reduce trip hazard potential
- Ergonomically engineered toe spring for reduced wearer fatigue
- Nylon shank—ensures correct step flex point and assists with torsional stability
- Airport friendly
- Broad fitting 200 Joule impact resistant composite toe cap

However, if your feet are exposed to the risk of repetitive impacts, penetration or cutting hazards or electrical hazards, then we recommend that you consider one of our steel safety toe boots as they may be more suited to your needs.

GUMBOOTS

If you work in mining, the food industry or any job where you get your feet wet, you already know how valuable a good pair of gumboots are.

Built in Tasmania to our exacting standards, these are the best out there.

Blundstone #028 gumboots are world-leaders, packed with innovative safety and comfort features.

WORLD FIRST

Revolutionary design technology has been used in the world's first internal Metatarsal Guard Gumboot incorporating XRD® Extreme Impact Protection, guarding the delicate metatarsal bones of the foot. It is soft, lightweight, comfortable, low profile and contoured to your foot, enabling full flexibility.

Reinforced ankle and heel with kick-off lip.

Protective patterning providing greater resistance to cuts and abrasions.

Removable Arch support PU footbed with XRD® Technology.

Steel penetration-resistant midsole.

Steel toe cap.

Made super-long for comfort and warmth, these are ideal for wearing under gumboots.

FITS SIZE: 7-12
COLOUR: NAVY
CODE: SOCKBBNAV

Blundstone boot care

While Blundstone boots are designed to last, it's vital that you care for them to help prolong their life and lustre.

CLEANING LEATHER

Remove any caked dirt on your boots with a soft bristled brush or damp cloth and leave your boots to air dry. Please ensure that your boots are away from direct sunlight or any heaters, as they will dry out the leather.

Apply leather polish, spray or cream to the leather to help maintain your boots. If you are using a polish for the first time, try it on an inconspicuous area of the boot to check whether it alters the colour or appearance.

If using a polish, apply a small amount of leather cleaner to a polishing cloth or brush and rub onto the boot in circular motions.

Wipe away the residue and again leave to dry.

CLEANING NUBUCK

Use a dry nubuck cloth to remove any surface dirt. Then brush gently with a nubuck brush. Use a circular motion, taking care not to spend more than a few seconds on any area.

If you have any scuffs, remove them with a gum eraser. Simply rub the scuff with the eraser and wipe away the rubber debris. Alternatively, try a spray-on nubuck cleaning solution, then wipe the area with a nubuck cloth. It is important to follow the instructions on such products and ensure it is tested on a small area before wider application.

Dab the boots with a clean towel to remove any excess moisture and leave to air dry.

Apply a nubuck water and stain repellent on the boot to help prolong the life of your boots.

Remember, it's a good idea to waterproof boots regularly to protect the leather from staining. If the leather is wet, let it dry naturally prior to cleaning or using any cleaning substances.

CLEANING SUEDE

Use a suede or soft brush, to scrub off any surface stains or dirt.

If you have any scuff marks, you can remove them with a gum eraser. Simply rub the scuff with the eraser and wipe away the rubber debris.

Then dampen a soft brush with a little water and pour a small amount of suede and leather cleaner on it. Then clean the boot, focussing your attention on any particularly stained spots.

Dab the boots with a clean towel to remove any excess moisture and leave to air dry.

Once dry, apply a water and stain repellent spray on the boot to help prolong their life. Some suedes are best treated prior to wear if they have not been treated.

It's a good idea to waterproof boots regularly to protect the leather from staining. If the leather is wet, let it dry naturally prior to cleaning or using any cleaning substances.

EXTRA TIPS

Never dry your boots by an open fire or artificial heat source, as this will cause the leather to harden, shrink and crack. It can even cause the leather to pull away from the sole. Always dry your boots naturally at room temperature.

Always store your boots in a well ventilated, cool place away from sunlight or any heat which will tarnish the leather.

You should use a leather conditioner on your boots whenever they need them. If your boots are looking a little scuffed and worn, always remember to use a conditioner.

Avoid exposing your boots to chemical contamination. Solvents, strong acids and alkalis will do irreparable damage on leather, whilst commonplace substances like milk and salt are also highly damaging. In the event of exposure, clean the boots immediately.

You should only use good quality cleaning substances and ones specific to the material of your boots.

Comfort Guarantee

Consumers can try a pair of correctly fitted blundstone footwear for up to 30 days from the date of purchase from one of our approved resellers and if the footwear is not comfortable, they may return it.

To make a claim under this guarantee, they must return the footwear (at their own cost) to the store they bought them from.

They must be accompanied by the original purchase receipt and the return must be made within 30 days.

Provided the footwear is not damaged, and they otherwise comply with the terms prescribed by this guarantee, they may choose between a full refund or a footwear exchange up to the original purchase price of the footwear as set out on the receipt.

6 Month Manufacturer's Guarantee

We take great care in the manufacture of our products and offer a 6 month warranty on any products purchased directly from us or from any of our trusted resellers.

If, following an assessment, we determine that the footwear contains a manufacturing fault that renders it unsuitable for the purpose for which it was originally purchased, we will replace or repair them at our expense.

This warranty is void if the footwear has been used in a way that has caused damage to them beyond normal wear and tear. This includes, without limitation, the exposure of the product to caustic materials that may cause the footwear (or parts thereof) to break down.

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. Consumers are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. They are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Blundstone Company Values

FAMILY

Our people are the driving force of our business. We care for, respect and value the diverse group who are our family.

CUSTOMER

Our mission is to listen to, understand and deliver on the needs, wants and expectations of our consumers and our customers.

COMMUNITY

We are proud to be an active, positive and contributing member of our communities, locally and around the globe, today and for future generations.

DESIGN

We are committed to designing innovative, quality, honest products, services and experiences that are fit for purpose.

INTEGRITY

We always seek to do the right thing: to behave ethically; to act lawfully; to act with integrity and to minimise our impact on the environment.
